No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                  The specification describes soluble recombinant proteins that comprise at least a dimer formed from the alpha and beta-chains of MHC (major histories) and complexible in which at least conscious that it is a dimer formed to its C-terminus, at least part of the Fc region of an immunoglobulin. The recombinant proteins, when linked to an antigenic peptide, are used to count and/or purify antigen-reactive T lymphocytes and to characterize their phenotype, e.g. in preclinical evaluation of vaccines. They are also used as immunostimulants, particularly for vaccine development (against infections and tumours), to count and determine phenotype of autoreactive T cells in subjects with, or at risk of developing, autoimmune diseases, e.g. for staging or evaluating treatments, and (to purify and/or enrich Ag-reactive T cells crown cell cultures or patient samples, for use in subsequent curative or preventative cellular therapy. The present sequence encodes a recombinant protein of the invention, comprising a beta chain of MHC molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents a hybrid IA beta chain gene, containing the chicken ovalbumin peptide (cOVA). This sequence was used in the construction of a hybrid IA alpha beta dimer. The encoded protein (pIAd-OVA) was found to be more stable than the IA alpha beta dimer. The stability was decreased by the addition of a MHC groove specific binding peptide (e.g. see AAR82527, AAR8258 and AAR82511), compared to an increase seen on the addition of a MHC binding peptide to IE k/dMCC. These complexes may be used to regulate an immune response. The complexes are capable of being recognised by a TCR alone or in combination with additional MHC proteins. These complexes are useful for therapeutic additional MHC proteins. These complexes are useful for therapeutic purposes and experimental purposes. They can also be used as reagents the treatment of diseases including autoimmune diseases, immunodeficiency diseases, immunoproliferation diseases, and graft-host rejection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        168
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             225
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide-MHC complex comprising antigenic peptide, linker and MHC segment - useful as reagents for the treatment of diseases including auto-immune diseases, immuno-stimulatory diseases or graft-host rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ద
                                                                                                                                                                  ð
                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                  The invention relates to a novel class II major histocompatibility complex (MHC) antigenic peptide composite comprising a peptide containing the T-cell antigenic determinant of a mucous membrane invasive protein and the extracellular region of a class II MHC molecule or at least part of the extracellular region of the class II MHC molecule having an amino acid sequence comprising one or more deletions, substitutions or additions. The molecule of the invention may be useful for detecting an antigen-specific CD4+ T-cell by flow cytometry and for presenting a microorganism-derived mucous membrane invasive protein as an antigen. The method of the invention enables efficient detection of antigen-specific activation of CD4+ T-cells in the mucous membrane. The current sequence is that of the class II major histocompatibility complex-related I-ho(alpha)-Cholera toxin B subunit (CTB)-leucine zipper (LZ)-BirA fusion
                                                           Peptide-Class II major histocompatibility complex (MHC) composite, useful for detecting antigen specific CD4+ T-cell, comprises antigen peptide containing epitope of mucous membrane invasive protein, and extracellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            300

The invention relates to a novel class II major histocompatibility complex (MHC) antigenic peptide composite comprising a peptide containing the T-cell antigenic determinant of a mucous membrane invasive protein and the extracellular region of the class II MHC molecule or at least part of the extracellular region of the class II MHC molecule having an amino acid sequence comprising one or more deletions, substitutions or additions. The molecule of the invention may be useful for detecting an antigen-specific CD4+ T-cell by flow cytometry and for presenting a microorganism-derived mucous membrane invasive protein as an antigen. The method of the invention enables efficient detection of antigen-specific activation of CD4+ T-cells in the mucous membrane. The current sequence is that of the class II major histocompatibility complex-related I-Ab (alpha)-Escherichia coli hear-labile toxin B subunit (ITB)-leucine
                                                                                                                                                                                                                                                                                                                                                                                                                                       zipper (LZ)-BirA fusion cDNA of the invention.

This nucleotide sequence comprises a PCR product obtained by amplification of mouse splenocyte cDNA using primers (see AAV12065 and AAV12066) designed for the amplification of Ind beta chain full-length cDNA. IAd alpha chain cDNA (see AAV12067) has been similarly obtained.

The IAd sequences were cloned into metallothionein promoter (see AAV12067)-driven vector pRMH=3 prior to sequencing. Major have compatibility complex (WHC) class II IAd heterodimers were expressed at the cell surface of transfected Drosophila Schneider 2 (ATCC CRL of 1974) cells. The invention relates to the preparation and use of synthetic antigen presenting matrices, in particular antigen presenting cells such as insect cells that have been transfected to produce MHC antigen presenting molecules with one or more accessory molecules. The matrices are used to activate naive CD4+ T cells and to shift the ongoing cutivation state into a preferred differentiated population of Th1 or Th2 cells. Applications include the treatment of autoimmune disease, e.g.

                                                                                                                                                                                                                                                                             This sequence represents a hybrid IA beta chain gene. This sequence contains a fragment of the IE alpha chain (residues 56-73), as well as a linker and cleavage site. This sequence was transfected into a B cell line (M12.C3) using plasmid pM12-IAb-Ea. It was found that the encoded sequence was expressed in these cells. Complexes such as this may be used to regulate an immune response. The complexes are capable of being recognised by a TCR alone or in combination with additional MHC proteins. These complexes are useful for therapeutic purposes and experimental purposes. They can also be used as reagents for the treatment of diseases including autoimmune diseases, immunodeficiency diseases, immunoproliferation diseases, and graft-host rejection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        115

The MHC fusion complex comprises at least one MHC molecule containing a peptide-binding groove and a presenting peptide covalently linked to the MHC molecule and opt. a transmembrane domain. DNA encoding a MHC fusion complex may be cloned transmembrane domain. DNA encoding a MHC fusion complex may be cloned transmembrane complex that modulate, pref. antagonise, T cell activity. DNA encoding a MHC fusion complex or a single chain fusion complexes may be used to vaccinate a mammal against a targeted disorder. The fusion complexes may be used to suppress an immune response in an immal suffering from an immune disorder e.g. multiple sclerosis, insulince animal suffering from an immune disorder e.g. multiple sclerosis, insulince chronic allergies. The complexes may also be used in the treatment of livestock and pets such as cats and dogs. The MHC fusion complexes can be produced such that they contain a single antigenic peptide including one of known structure, additionally a wide range of peptides can be presented for T cell interaction

The invention relates to a major histocompatibility complex (MHC) fusion complex (I) comprising an MHC molecule that contains a peptide-binding growd, and a presenting peptide covalently (e.g. an antigenic peptide) linked to the MHC molecule, where (I) is capable of modulating the complex, where the MHC molecule is a class II MHC (e.g. mouse I.Ad or I.C. complex, where the MHC molecule is a class II MHC (e.g. mouse I.Ad or I.C. day, or human HLA-DR1 (human leukocyte antigen-DR1), a multivalent MHC fusion complex comprising two or more linked complexes, identifying a peptide that can modulate the activity of T cells (involving introducing introducing introducing the host cells cloning vectors that each contain the fusion complex DNA, culturing the host cells under conditions suitable for expression of the MHC fusion complex that modulate the activity of T cells), a single recombinant expression complex that modulate the activity of T cells), a single recombinant complex that modulate the activity of T cells), a single recombinant complex that modulate the activity of T cells), a single recombinant complex that codes for a T cell costimulatory factor and the alpha and beta chains of the MHC fusion complex. The DNA constructs can contain complex and beta chains of the MHC fusion complex. The DNA constructs can contain complex and beta chains of the fusion complex. Also included are inducing an immune response in a mammal directing DNA sequence comprising a fusion complex, or DNA sequence coding for a fusion complex which is a single chain fusion molecule that contains a transmembrane domain, and a presenting peptide that contains a transmembrane domain, and a presenting peptide that contains a single chain fusion molecule coding for the fusion complex which is a single chain fusion molecule coding for the fusion complex which is a single chain fusion molecule coding for the fusion complex which is a single chain fusion molecule coding for the fusion complex is a single chain fusion molecule coding for identificati
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel major histocompatibility complex fusion complex having presenting peptide covalently linked to MHC molecule containing peptide-binding groove, used for suppressing immune response in multiple sclerosis,

                                                                                                         AAT17586 encodes a murine MHC fusion complex capable of modulating T cell activity encoded by the vector SSC1. The MHC fusion complex comprises at least one MHC molecule containing a poptide-linding groove and a presenting peptide covalently linked to the MHC molecule and opt. a transmembrane domain. DNA encoding a MHC fusion complex may be cloned into a host cell to express the complex. The transformed cells may then ce used to identify peptides that medulate, pref. antagonise, T cell may then complex or a single chain fusion molecule may be used to vaccinate a mammal against a targeted disorder. The fusion complexes may be used to suppress an immune response in an animal suffering from an immune disorder e.g. multiple sclerosis, insulince chaonic allergies. The complexes may also be used in the treatment of livestock and pets such as cats and dogs. The MHC fusion complexes can be produced such that they contain a single antigenic peptide including one of known structure, additionally a wide range of peptides can be presented for T cell interaction

The invention relates to a major instruction to complex (I) comprising an MMC molecule that contains a peptide-binding complex (I) comprising an MMC molecule that contains a peptide-binding of groove, and a presenting peptide covalently (e.g. an antigenic peptide) inked to the MHC molecule, where (I) is capable of modulating to the complex, where the MHC molecule is a class II MHC (e.g. moulating for the complex, where the MHC molecule is a class II MHC (e.g. moulating for I. Also included are antigen-DRI), a multitualent MHC fusion complex comprising two or more linked complexes, identifying a peptide that can modulate the activity of T cells (involving introducing into host cells cloning vectors that each contain the fusion complex will be complex that modulate the activity of T cells (involving introducing into host cells under conditions suitable for expression of the MHC fusion complex will protein, a single recombinant expression vector comprising DNA that codes for the alpha and beta chains of the MHC fusion complex. The DNA constructs and complex will peptide sequences and Kozak sequence for efficient capable and beta chains of the MHC fusion complex. The DNA constructs and contain cherecologous leader peptide sequences and Kozak sequence for efficient capable and suppression of the fusion complex. Also included are inducing an immune response in a mammal (including vaccinating a mammal by administering DNA sequence comprising a transmembrand by administering complex winch is a single recent of the fusion complex which is a single forth of molecule that contains a transmembrand domain, and a cull length MHC molecule that contains a transmembrand domain, and a cull length MHC molecule that contains a transmembrand by administering peptide that contains a transmembrand and suppressing an immune response in a mammal grained a targeted disorder, and secure coding for the fusion complex which is a single chain a mammal disorder become coding for the fusion complex which is a single chain an expension of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          invention relates to a major histocompatibility complex (MHC) fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel major histocompatibility complex fusion complex having presenting peptide covalently linked to MHC molecule containing peptide-binding groove, used for suppressing immune response in multiple sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BP; 316 A; 383 C; 399 G; 287 T; 0 U; 0 Other;

transmembrane domain. DNA encoding a MHC fusion complex may be cloned into a host cell to express the complex. The transformed cells may then be used to identify peptides that modulate, pref. antegonise, T cell activity. DNA encoding a MHC fusion complex or a single chain fusion molecule may be used to vaccinate a mammal against a targeted disorder. The fusion complexes may be used to suppress an immune response in an animal suffering from an immune disorder e.g. multiple sclerosis, insulindependent diabetes mellitus, rheumacoid arthritis, myssthenia gravis or chronic allergies. The complexes may also be used in the treatment of livestock and pets such as cats and dogs. The MHC fusion complexes can be produced such that they contain a single antigenic peptide including one of known structure, additionally a wide range of peptides can be presented for T cell interaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240

The invention relates to new single chain major histocompatibility complex (sc-MHC) class II complexes that comprise a peptide binding groove, and a modified class II beta 2 chain or covalently linked camplex, and a modified class II beta 2 chain or covalently linked immunoglobulin (Ig) light châin constant (I) region. The MHC complexes are useful for detection and analysis of peptide ligands, pathogenic T-cells, for functional, cellular and molecular assays. They can be used to cidentify and isolate T cell receptor and/or MHC agonists and antagonists. They can also be used to calls involved in immune-related disorders. They can also be used to craise antibodies and to screen immune cells. It is also use in a method of suppressing an immune response in mammals. The sc-MHC complexes of suppressing an immune calls in the sc-MHC complexes comprising modified class II beta 2 chains and/or Ig-c1 regions are comprising modified class II beta 2 chains and/or Ig-c1 regions are soluble and provide enhanced yield. These MHC complexes also can contain significant quantities. The polyspecific MHC complexes also provide a means to detect cells expressing multiple target structures with a single complex. The present sequence represents a DNA encoding a single chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                           1 atggctctgcagatccccag......agcatcatcatcatcatcat
